Persuasive Potential

By empowering millions of people to create persuasive experiences with technology, we will have thousands, and perhaps millions, of forces working toward the better in the world.

Hazards of Open Science

- Failure (not delivering a radical and positive change, not attracting our biggest talents and nurture diverse communities).
- To become an exclusive movement of public research that continues to enlarge the disconnection with Society.
- To associate "Open" with "Ignore", especially when it comes to resources that are needed to perform 'open' methods.
- To build blocks of 'net beneficiaries' that rarely move to 'contributors' side.
