

# Facilitating FAIRness with a Stockholm University machine- actionable DMP Online template

**Joakim Philipson** - Research Data Analyst

(Stockholm University, RDM team)

Focus on Open Science 2021-06-18

# National requirement

- As from 2019, all grantees from [Swedish Research Council](#) must have a **data management plan** if the research generates research data.
- *Swedish Research Council (VR)* & Association of Swedish Higher Education Institutions (**SUHF**) collaborated on partially reworked version of **Science Europe's** Core Requirements for Data Management Plans – now a template in the **DMP Online** tool – *but only free text fields*
- **Stockholm University** offers DMP Online tool as default to all our researchers at [dmp.su.se](http://dmp.su.se) via SSO local login
- Other DMP tools: [ARGOS](#), [DSW](#), [DMPTool](#) , [easyDMP](#), [RDMO](#) - ... all more or less converging to [RDA Common Standard](#) to produce more *machine-actionable, maDMPs*

## Multiple purpose of SU maDMP template

1. *Easing the administrative burden on researchers to fill in the DMP by means of preset multiple-choice answer options, drop-down menus, radio buttons etc., including extensive local Guidance*
2. *Facilitating semi-automated review and evaluation of FAIRness, while retrieving needed information for RDM administration*
3. *Conforming to the RDA DMP Common Standard for machine-actionable DMPs by validation against maDMP-schema-1.1*

## Features of SU maDMP template

- *Preserves structure (sections I-VI) and original questions from Science Europe – Swedish Research Council (VR) in headings, but with more specific questions and answers (checkboxes, drop-down menus, radio buttons: yes/no/unknown)*
- Using DMP Online (Roadmap) API (v0) to get output (as JSON) of entire DMPs (questions and answers) for further processing

- Workflow:

1. APIv0 `curl GET https://dmp.su.se/plans/72835 ->`

```
$ curl -G -k "https://dmponline.dcc.ac.uk/api/v0/plans?plan=72835" -H  
"Authorization:Token token=XYZ123456789sTuV012345" > DMP72835.json
```

2. Oxygen: `dmp72385.json` **2** `dmp72385.xml` conversion ->

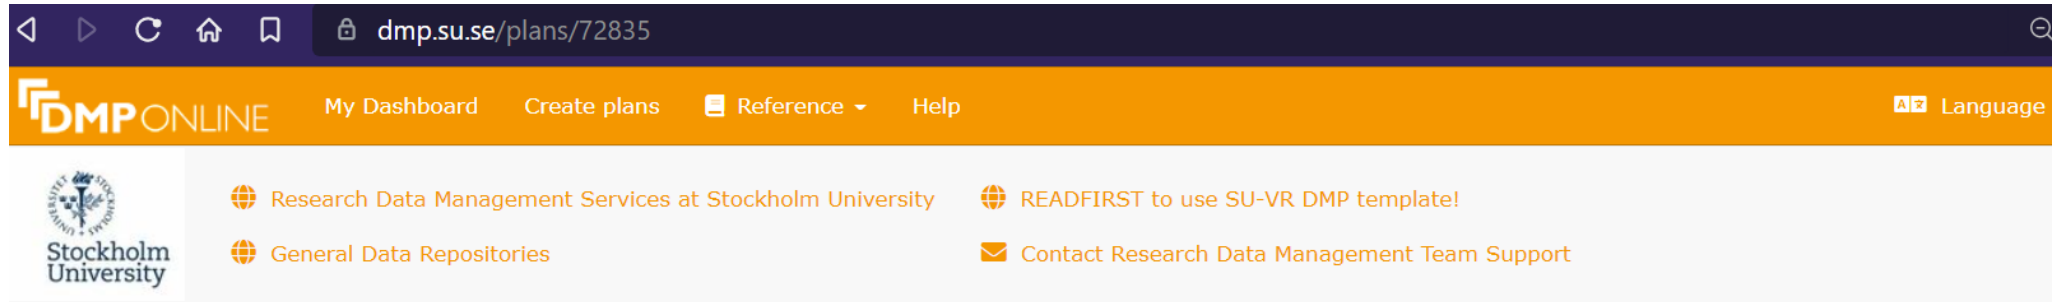

3. `dmp72385.xml` **2** `dmp72385transform.xml` with XSLT

[allowing FAIR-evaluation] ->

4. `dmp72385transform.xml` **2** `dmp72385transform.json` ->

5. `dmp72385transform.json` validated with RDA maDMP

# Test example DMP of SU-VR template

The screenshot shows the top navigation bar of the DMP ONLINE application. The address bar displays 'dmp.su.se/plans/72835'. The navigation menu includes 'My Dashboard', 'Create plans', 'Reference', and 'Help'. A language dropdown is set to 'Language'. Below the navigation bar, the Stockholm University logo is on the left. To the right, there are four links: 'Research Data Management Services at Stockholm University', 'READFIRST to use SU-VR DMP template!', 'General Data Repositories', and 'Contact Research Data Management Team Support'.

### 0: Note on personal data! (1 / 1)

Please sign the following declaration before proceeding with your DMP!

"As a SU user of DMP Online I am aware that, except for information about project members such as PI and contact person, *no personal data* - i.e. any information relating to an identified or identifiable natural person (a '*data subject*', that is a *living* person), should be registered *in this DMP*. If necessary, to avoid this, any actual data registered here (even only as examples) will be completely anonymised before registration."

**Q1: I have read and understood the above declaration and hereby certify that this DMP contains no personal data except for information about project members such as PI and contact person.**

# Testing SU maDMP model for Climate Data: Sharing the seas.

Project Details Contributors Plan overview Initial DMP Full DMP (undeveloped) Share Download

expand all | collapse all 33/33 answered

0: Note on personal data! (1 / 1) +

I: Description of data – reuse of existing data and/or production of new data (7 / 7) -

Original (VR) questions:

- How will data be collected, created or **reused**?
- What types of data will be created and/or collected, in terms of data format and amount/volume of data?

A question about expected amount/volume of data is answered below in the section on Storage and backup so is not needed here.

The questions below are meant to give answers conforming to the [RDA-DMP-Common-Standard maDMP-schema-1.1.json](#), describing 1. Data Quality Assurance measures: file formats, file naming conventions, data cleaning etc. 2. Dataset Id(s), 3. Dataset Id Type, 4. Dataset Description.

Each dataset within a project should ideally have separate answers to questions 2-4. However, at this level in the initial phase, a dataset is defined here only at a conceptual level, so if detailed identifiers of individual datasets or files are still lacking, there is the possibility of regarding the entire project as one dataset, and give the identifier, identifier type and description of that as answers to questions Q2-Q4.

An answer to question Q1 (text), could also cover all datasets within a project.

Questions Q6-Q9 concern at this point only the sources or access points of **Reused datasets** that have already definite identifiers, locations and formats ("distribution" in the vocabulary of the DCAT standard).

**Q1: Data Quality Assurance measures (FAIR data): please check multiple options that will apply to assure quality and integrity of data collected, created or reused.**

- 1. Non-proprietary file formats (e.g. .csv, .txt, .json)
- 2. Sustainable file formats (e.g. .pdf; .csv; .txt)
- 3. Software specific file formats (e.g. Matlab - .mat; Stata - .dta)
- 4. Proprietary file formats (.doc ; .xls)
- 5. Dated file names (e.g. '20201011StockholmMeanTemperatures.csv')
- 6. Descriptive file names (e.g. '20201011StockholmMeanTemperatures.csv')
- 7. File names with only character set [0-9A-Za-z-\_.], no spaces.
- 8. Other measures (please specify!)

## Demo DMP example of SU-VR template: I-Q1

Guidance	Comments
SU	Options 1 and 2 for <i>file formats</i> will make your datasets more <b>Interoperable</b> and <b>Re-usable</b> , and so will score higher on <b>FAIR</b> data. (For sustainable and preferred file formats, please consult further: <a href="#">Sustainable digital file formats from Library of Congress</a> , and / or the <a href="#">SND file format guide</a> .) Options 5, 6 and 7 for <i>file names</i> will make your data files more <b>Findable</b> (and thus also contribute to your <b>FAIR</b> data score).

Guidance

Comments

SU

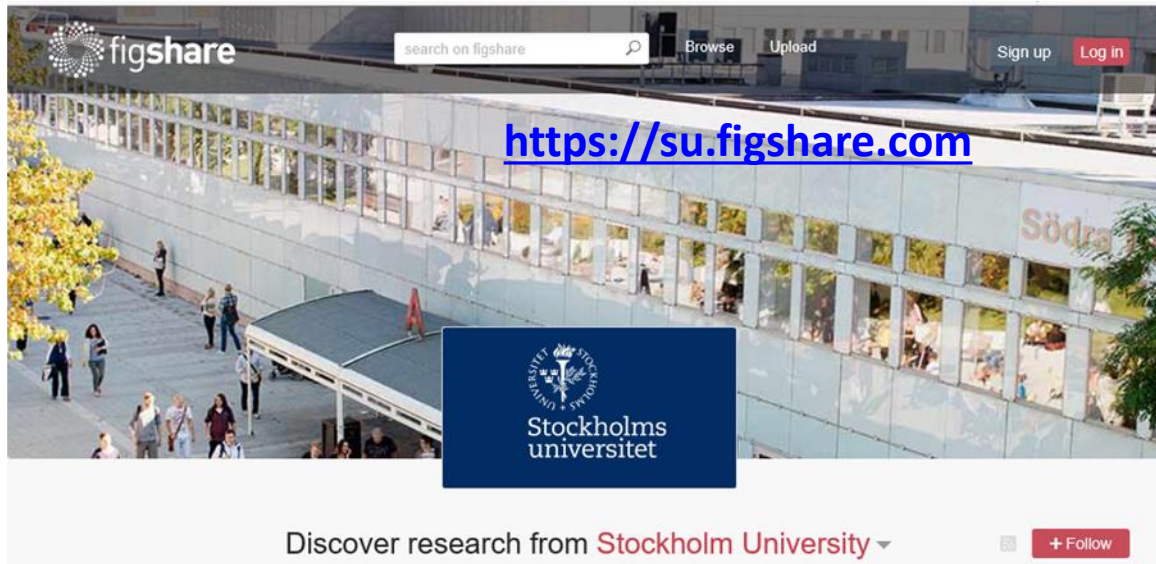

The **first four** options of **repositories** are described **here on SU research data web pages**, where you also will find direct links to them. These repositories are also curated by members of the Research Data Management Team at SU, which means you can get further local support when creating metadata for your project using these services.

The **Bolin Centre for Climate Research** at SU have their own domain specific repository (database), with particularly good visualization of data. It is curated and administered by staff at the Bolin Centre.

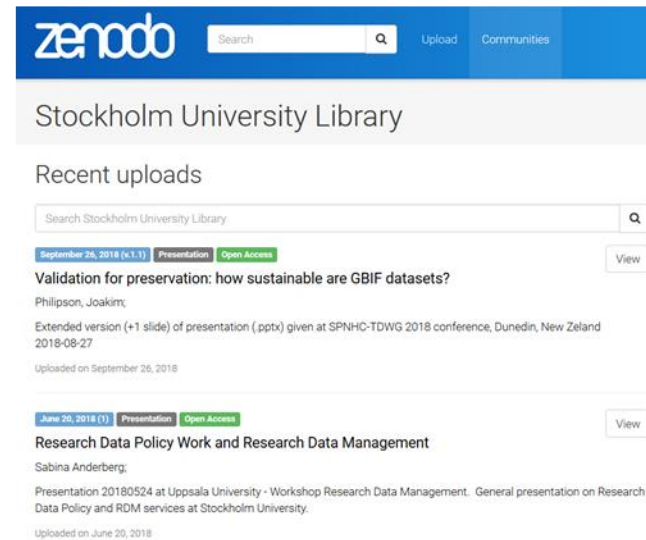

If other, please specify URI (link).

Please note, datasets containing *personal data*, i.e. *any information relating to an identified or identifiable natural person* (a 'data subject', that is a living person), should as a rule *not* be uploaded to cloud-based repositories with servers subject to jurisdiction outside EU-EES, e.g. *Dataverse* (presently at Harvard.edu; may change to local SU-server later), *su.figshare.com*. (SU instructions regarding the use of cloud services are [here](#).)

Guidance Comments

SU

**1. Data clean(s)ing** and consolidation will contribute to secure quality of data overall. (Here are some possible tools to use for this: [frictionlessdata.io](https://frictionlessdata.io) ; [goodtables.io](https://goodtables.io) ; [openrefine.org](https://openrefine.org) )

**2. A detailed *description*** (preferably as part of the general metadata entered in a repository web form) of ***file formats and software*** that was used to produce the dataset and possibly (in the case of software specific formats) also needed to open or understand/interpret the data will help make your dataset more Re-usable - and thus more FAIR!

**3. Integrity checks** of datafiles are facilitated by data repositories by means of *checksum* algorithms such as MD5, SHA-256 etc. [<https://en.wikipedia.org/wiki/Checksum>, <https://en.wikipedia.org/wiki/SHA-2>] These may be particularly relevant to apply when data files are moved from one location to another, to check that nothing was lost on the way or that data has not been "corrupted" since a previous upload. Automatic integrity checks, producing a hash check sum, are built- in to certain applications, but there are also tools to download freely for this, such as DROID from National Archives, UK.

**4. Preregistration** "is the practice of

Answered 1 minute ago by joakim.philipson@su.se

This answer removes 2 questions from your plan.

Guidance	Comments
SU	<p>The <i>General Data Protection Regulation (GDPR)</i> provides the following definition (article 4.1):</p> <p><i>'personal data' means any information relating to an identified or identifiable natural person ('data subject'); an identifiable natural person is one who can be identified, directly or indirectly, in particular by reference to an identifier such as a name, an identification number, location data, an online identifier or to one or more factors specific to the physical, physiological, genetic, mental, economic, cultural or social identity of that natural person.</i></p> <p>If you need help to find out whether you will be processing <i>personal data</i> in your project, answer "unknown" and the SU-RDM team will be automatically notified and will contact you about your potential need for support.</p>

## Demo DMP example of SU-VR template IV-Q1

Original (VR) questions:

- How is data handling according to legal requirements safeguarded, e.g. in terms of handling of personal data, confidentiality and intellectual property rights?
- How is correct data handling according to ethical aspects safeguarded?

**Q3: Will the creation, collection or reuse of dataset(s) in your project entail any of the following:**

- (a) processing of *special categories of personal data* according to the General Data Protection Regulation (EU 2016/679), i.e. personal data revealing racial or ethnic origin, political opinions, religious or philosophical beliefs, or trade union membership, and the processing of genetic data, biometric data for the purpose of uniquely identifying a natural person, data concerning health or data concerning a natural person's sex life or sexual orientation
- (b) processing of personal data regarding violations of law that include crimes, judgments in criminal cases, penal law sanctions, or administrative deprivation of liberty
- (c) physical interventions on research subjects or deceased persons
- (d) methods with the purpose of affecting a research person physically or mentally, or which includes an apparent risk of injuring the research subject either physically or mentally
- (e) studies of biological material that has been taken from a living or deceased person, and can be traced to that person

Or, further, will the creation, collection or reuse of dataset(s) in your project include:

- (F) Data from [animal research](#)
- (G) Data on genetic resources and/or traditional knowledge associated with genetic resources
- (H) Data that can be used for military purposes or concerning products that can be used for military purposes
- (I) Data that are sensitive in some other respect

(Possible ethical review documentation applying to any of points (a-e) will be asked for separately.) If you answer yes to any of the points (F-I) and there is already relevant documentation or applications, please provide (a) reference(s) to any application(s)/ approval(s)/decision(s)/document(s), if possible by URL(s) / PID(s) such as DOI(s) giving direct access, or registration no. (Swe. *diariennr.*) in the text field below.

- yes  
 no  
 unknown  
 yes, but not (a-e)
